

FIRE AND SECURITY FOR DATACENTRES

**Fire detection & suppression systems,
safe for life & sensitive electrical equipment**

FPG fire and security solutions protect leading datacentres from fire with very early laser based smoke detection and fast acting fire suppression. Secure areas can be restricted by access control, CCTV and intrusion detection. We help achieve 100% up-time and extinguish fire with suppression systems that do not corrode or damage sensitive electrical equipment, while leaving the atmosphere safe for life.

RESILIENCE & UP-TIME

With the proliferation of cloud-based business software, big data, and organisations moving their critical systems from local to cloud services, 100% availability and up-time is more essential than ever to avoid customer dissatisfaction. Our fire suppression systems react quickly and extinguish without corrosion or damage to sensitive electrical equipment, while leaving the atmosphere safe for life.

ACCREDITED & CERTIFIED

FPG is fully accredited and certified, providing solutions since 1989. Our in house team of consultants, designers, and fire risk assessors ensure that the systems we install are best-in-class and comply with legislation.

COMPLETE FIRE & SECURITY SOLUTION

FPG is a single-source provider for fire, security and safety solutions. Systems can be networked and integrated, improving ease of use and streamlining building operations.

A LONG TERM RELATIONSHIP

The installation of an FPG system is only the beginning of a long term relationship. Our maintenance agreements, 24/7 emergency service and local support ensure the long term safety and security of your site.

SOLUTIONS FOR:

- DEDICATED FACILITIES
- IN-HOUSE SERVER ROOMS
- BIG DATA
- CLOUD-BASED BUSINESS
